

SOCIALBIOME

Does Your Workforce Feel Safe Enough to Perform?

The missing condition behind burnout, disengagement, and
breakdown in performance.

Introducing **Relational Coherence**.

Presented by

Lori Wallace

Founder. Steward of Relational Coherence

SocialBiome

Are you able to predict and maintain workforce performance?

Message from Lori Wallace Founder, Steward of Safety

Organizations are rightly focused on maximizing workforce performance.

Billions are invested each year in hiring, training, leadership development, and culture initiatives. And yet—burnout persists. Performance stalls. Teams struggle to collaborate under pressure.

What's missing is not strategy, talent, or effort. **It's safety.** Not physical safety—but emotional and social safety.

At its core, performance is biological. The human nervous system is constantly scanning for cues of safety or threat in the social environment. When people feel safe, the system opens—supporting clarity, connection, creativity, and sustained performance.

When people feel under threat—whether from pressure, disconnection, or lack of trust—the system shifts into protection. Cognition narrows. Collaboration breaks down. Performance declines.

This is not a mindset issue. It is a physiological one. And it is the most overlooked driver of performance today.

SocialBiome was created to address this gap. To build the conditions where people feel safe enough—emotionally and socially—to think clearly, work together effectively, and perform at their highest level.

Because the future of success will not be determined by talent alone—but by whether people feel safe enough to use it.

Lori Wallace

Founder, SocialBiome

When Goals Go Unmet

Across industries, and especially in healthcare, organizations are facing an escalating reality: people are operating under mounting nervous system strain. This is not conducive for work. Quite the opposite, nervous system strain disrupts work.

That jibes with these alarming stats:

- 70% of employees are disengaged ([Gallup](#))
- Workplace stress costs \$300B annually in the U.S. ([UMass Lowell](#))

Key Intel: Google's Project Aristotle

Between 2012 and 2014, Google ran a project called Aristotle to try to understand why some teams operate at peak performance while others with the same skill levels, break down. The findings were ground breaking.

The primary indicator of performance was safety, not skill.

Skills training will not solve the problem.

Traditionally, organizations have invested heavily in workforce solutions, viewing breakdown solely as an issue of leadership training, clarity and workload. While these issues matter significantly, they fail to address the heart of the matter: chronic nervous system dysregulation amongst the workforce. (Click [here](#) to view the full comparative analysis between traditional versus nervous system centric approaches.)

Research published in Harvard Business Review shows that leadership training alone rarely produces lasting organizational change. ([Reference](#))

What is missing is the presence of workplace conditions that foster emotional and social safety for all.

**The Leading Indicator of
Team Performance is
Emotional & Social
Safety**

A Core Solution: Relational Design

SocialBiome introduces a foundational framework built on 5 Conditions that support emotional and social safety at work—thereby empowering peak performance.

The 5 Conditions

Social Intelligence

Developing shared understanding of human behavior and nervous system dynamics via “The Three Intelligences”, which include: 1) Nervous System Intelligence, 2) Living Systems Intelligence, and 3) Relational Leadership Intelligence.

Social Agreements

Establishing clear norms and expectations for how people communicate, make decisions, handle tension, and work together across teams.

Social Infrastructure

Creating the structures, practices, and rhythms that support healthy interaction and collaboration throughout the organization.

Social Meaning

Connecting daily work to a shared sense of purpose so that individuals understand how their contributions support the mission and the whole.

Social Pulse

Maintaining ongoing awareness of how the system is functioning by regularly sensing trust levels, tension, and emerging issues within teams.

These **5 Conditions** amplify the human capacity to interpret, regulate, and relate.

They promote emotionally and socially safe work environments that support high functioning teams.

5 Conditions Applied to Organizational Life

#1 Social Intelligence

Common language and strategies for human relating that root into the 3 Intelligences and thereby tap into the very way humans are wired for safety, including: interpreting relational dynamics, recognizing stress signals, and guiding teams with nervous-system-aware communication.

#2 Social Agreements

Communication practices that cultivate trust and reduce threat responses. Teams apply agreements around curiosity before assumption, call-and-response communication, affirming permissions, and clear pathways for raising safety concerns and resolving conflict.

#3 Social Infrastructure

Engagement of structures that support coordination and enlivened process, including SocialBiome employee councils, continuous leadership intelligence support, board connection points, and meeting designs that center meaning, nervous system arrival, and inclusion of diverse voices and perspectives.

#4 Social Pulse

Continuous sensing of system health through trust surveys, leadership listening, management walk-throughs, onboarding feedback loops, idea channels, informal meeting pulses, and short feedback cycles following key initiatives.

#5 Social Meaning

Continuous affirmation of role impact and the working department's role in service delivery through ecosystem role mapping, customer impact storytelling, and seasonal reflection of departmental mission and ethos.

Emotional & Social Safety Requires Persistent Care

A Living Framework

SocialBiome is offered as leadership training and support, or more universally as steward working alongside leadership and staff to guide and nurture a high trust environment.

In the stewardship role, work is intentionally positioned outside of internal hierarchies in order to preserve emotional safety via honest dialogue and clear insight.

Initial Engagement

The work begins with a structured 6-month cycle, initiated with executive and manager level training into the 3 Intelligences, followed by Social Agreements (month 4), Social Infrastructure (month 5), and Social Meaning (month 6).

Depth support includes one-on-one servant-leadership coaching (bi-weekly) and leadership team engagements (once monthly), plus baseline assessment of Relational Coherence via the SocialBiome index (under 10 questions).

Full Integration & Ongoing Stewardship

This includes:

- Leadership communication to staff of **SocialBiome** partnership
- Training of remaining supervisory staff into the three intelligences
- Development of the remaining 4 Root Conditions, including Social Agreements, Social Infrastructure, Social Meaning, and Social Pulse
- Non-invasive training/inclusion of staff

SocialBiome serves as an ongoing partner to nurture and grow social and emotional safety at work.

Like any living system, human systems are alive and require ongoing care—including continued relational touch points, such as:

- Recruitment/Onboarding/Retention/Exiting
- Culture Enhancement
- Ongoing Leadership Support & Guidance

Ops Impact & ROI Drivers: Operational Impact (Field Environment)

The Performance Effects Are Measurable & Lasting

Higher retention, stronger onboarding, reduced errors and rework, and better field coordination.

Emotional and social safety supports performance, retention, and customer experience.

Ops Impact & ROI Drivers

- 10–20% improvement in retention
- Faster onboarding to productivity
- Reduced overtime and contractor spend
- Fewer field errors and rework
- Improved project timeline reliability
- Stronger crew coordination

Execution & Coordination

- Stronger coordination across crews
- Clearer handoffs and communication
- Stabilized performance under pressure

Customer Experience

- Improved customer satisfaction
- More reliable project delivery
- Greater trust in the work

Quality & Reliability

- Reduced field errors and rework
- Improved consistency in execution
- Fewer breakdowns under strain

- *Financial impact varies by workforce size, vacancy levels, and project load.*

Take Action

The work begins with a conversation to explore what's possible for your organization.
